

**Watermelon Gold in Gold F1**  
**AAS Edible Winner**

“Eye-catching and fun” was one judge’s comment about “Gold in Gold” Watermelon. The fruit’s outer color is yellow with golden stripes while the inner flesh is a lovely orange/gold. Crisp texture with high sugar contents is also an advantage. This winner is an early producing, high yielding, and improved disease resistant melon with a strong rind that resists cracking or bursting. The unique oblong shape of the 6-12 pound fruit makes it a perfect “icebox” watermelon and the tasty fruit is superior. Judges said, “We loved it!”
