

Okra Candle Fire F1
AAS Edible Winner

A unique red okra with pods that are round, not ribbed, and a brighter red color than the reddish burgundy okras currently available. This high-performing AAS Winner received high marks for productivity, taste, texture and tenderness as well as the ornamental value of red pods on red stems. One judge noted that Candle Fire okra was quite maintenance free to grow, except for the frequent harvesting, which is a great thing! Candle Fire thrives in the heat and is disease resistant even in hot humid climates like the south where it's perfect for traditional fried okra.
