

Cucumber Green Light F1

This little beauty is an excellent mini cucumber, said many of the AAS Judges. The yield was higher than the comparison varieties with more attractive fruit, earlier maturity and superior eating quality. “I would absolutely grow this in my home garden” commented one judge. Grow Green Light on stakes or poles for a productive, easy-to-harvest vertical garden that will yield 40 or more spineless fruits per plant. Pick the fruits when they’re small, between 3-4” long, and you’ll be rewarded with great tasting cucumbers, even without peeling. Succession plantings will ensure a summer-long harvest.

AAS® Winner Data
