

Squash Green Lightning F1

It's early and it's fast! Green Lightning squash impressed the judges with its early maturity. Judge: "This entry not only looked better, but also tasted better than the comparison. The color and pattern of the squash was novel and cute-pretty enough to use as a decoration. When cooked, this squash had a nice robust flavor that stood up to added seasonings." The nice medium and light green rind has an attractive glossy sheen. The small seed cavity on a smaller squash means more delicious edible flesh. No downsides to this beauty!

AAS® Winner Data

Genus species: *Cucurbita pepo*

Common name: Squash
